

MATHEMATICS FOUNDATIONS

Mathematics Foundations are one of the components of Numeracy Foundations within our district framework. Mathematics is an area of learning in our BC curriculum framework and this area of learning includes big ideas as well as content and competencies learning standards at each grade level. When we look across the grades K-12, there are key elements that build mathematical thinkers and doers of mathematics.

The mathematics foundations elements are connected to big ideas, curricular content and curricular competencies. Specific concepts are learned at different grade levels and this is reflected in the supporting materials for each element.

The elements of mathematics foundations are: number sense, computational fluency, data analysis, mathematical thinking, financial literacy and spatial sense.
